

Davey pumps' debut

Goscor Power Products has introduced the new single and two-stage Davey pumps powered by EX 17 and EX 21 Subaru engines.

GOSCOR Power Products (GPP), has introduced the new single and two-stage Davey pumps powered by EX 17 and EX 21 Subaru engines.

Mark Bester, GPP national sales manager, says that this equates to 6 and 7 hp respectively, which is unmatched in the industry.

"These self-priming engines are capable of a pumping head of 72 – 106 m and have a wide range of applications including in agriculture, fire-fighting, irrigation and high-head water transfer," says Bester.

Other important fea-

tures include a four-way discharge port for any installation with a choice of plumbing sizes; low-oil protection on all models – engines will not start or run if oil level is inadequate; and patented floating impeller neck rings both front and back.

These are outstanding pumps designed to work hard and last long," says Bester.

"They are competitively priced, easy to maintain and are set to revolutionise our local industry. We are planning for a significant demand for them," Bester says.
