## New carpet cleaning technology in SA

**G**OSCOR Cleaning Equipment (GCE) has launched Tennant's revolutionary ReadySpace Technology in South Africa. "Quite simply, this technology means that the space you occupy is ready 30 minutes after carpet cleaning has been completed," says GCE National Sales Manager responsible for contract cleaning, Alex Theodoridis.

He adds that not only is drying time ultra rapid but that ReadySpace also helps reduce mould and bacteria growth and leaves cleaner, healthier spaces by using 80% less water in the process and leaves up to 90% less water in the carpet.

"This is the ideal maintenance system," says Theodoridis. "In hotels, for example, house-keeping can finish cleaning the room carpet at 14:30 and the carpet is clean and dry and

ready for guest check-in by 15:00. Your office space can be cleaned at 06:30 and by 07:00 the carpet, dry and like new, is ready for you. And the list goes on."

The patented ReadySpace technology's three most important features are:

Unique Soil Transfer Rollers – these are the basis of ReadySpace. When damp these unique fabric rollers grab dirt from the carpet fibres and lift it into the machine.

Inside the machine, a sprayer rinses the soil from the rollers, *not the carpet*.

Then two powerful individual vacuum shoes extract the dirty water into the recovery tank.

Some of the more important benefits of ReadySpace are:

Ability to keep high-traffic areas looking new with frequent cleanings.

Reduce build-up with less chemical to help prevent re-soiling.

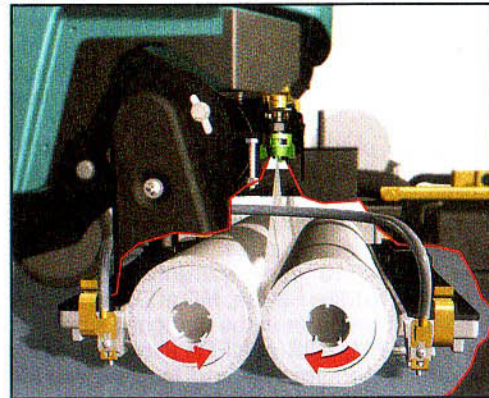

Reduce risk of slip-and-fall when transitioning from just-cleaned carpet to hard floor.

Maximise Carpet life. ReadySpace is a gentle process and does not damage carpet.

The ReadySpace machine (Tennant R3), with its ultra-low profile and compact design, cleans easily in tight, congested spaces with near effortless forward-reverse cleaning action.

The R3 is easy to fill and empty and is ergonomically designed for comfortable operation.

"This is the best technology available when professional cleaning in conjunction with super-rapid drying times is required," claimed Theodoridis.
