

# Big demand expected from new road sweeper

**G**OSCOR Rental Company (GRC) has announced that it now offers Elgin Crosswind industrial sweepers for rental.

GRC GM Greg Venter says that the Crosswind has proved itself globally as one of the most efficient and cost-effective industrial cleaners. "We have no doubt that demand for this will be exceptional especially in the rental market as the capital cost for outright purchase is quite substantial," says Venter.

Goscor's Elgin Crosswind is a powerful

sweeper with unequalled versatility, flexibility and productivity. Its re-circulating vacuum sweeper efficiently cleans large flat paved areas such as streets, parking lots, and airport runways.

"This machine is easy to operate and simple to maintain and like any machine with these characteristics it is durable and efficient. It is ideal for cleaning contractors, municipalities and large corporates. We have had special success with it on construction sites" says Venter.

The Crosswind ergonomic design allows the operator to sweep in a safe, comfortable manner. Mounted on the short-wheelbase chassis of either conventional or cab-over chassis, the Crosswind is operated by simple rocker switches and comes with a complete set of gauges.

A combination of large hopper and water tank, plus excellent fuel efficiency, allow the sweeper a long work period between trips to dumping, re-watering and fueling sites.

Taking on Elgin Crosswind sweepers is part of GCC's rapid expansion drive. "We are not only expanding, but are in the process of replacing our older fleet with new, state of the art equipment and we're confident that we will be able to continue to offer our customers the highest level of service," says Venter. *Enquiry no: 54*
