

New Davey pumps

Goscor Power Products (GPP) has introduced new single and two-stage Davey pumps, powered by Saburu EX 17 and EX 21 engines, equating to 6,0 and 7,0 hp respectively, which, according to GPP national sales manager Mark Bester, is unmatched in industry.

“These self-priming engines are capable of a pumping head of 72-106 m and have a wide range of applications including in agriculture, fire-fighting, irrigation and high-head water transfer,” he says.

Other features include a four-way discharge port for any installation, with a choice of plumbing sizes; low-oil protection on all models – engines will not start or run if oil level is inadequate; and patented floating impeller neck rings both front and back.

The new single and two-stage Davey pumps are powered by Saburu EX 17 and EX 21 engines.

Goscor Rental Company (GRC), has significantly expanded its forklift division to cater for the strong growth of the group's activity in this sector. Since the beginning of January 2011, the company has increased its forklift fleet by more than 20%.
