

Servest invests in Goscor sweepers

Goscor Cleaning Equipment (GCE), part of the Goscor Group of Companies, has supplied R3, 2-million worth of machinery to one of South Africa's largest cleaning companies, Servest, for the purpose of maintaining hygienic conditions at a ferrochrome mining operation in Middelburg.

Five years ago Servest acquired a Sentinel cleaning unit to clean up the dust and general dirt that emanated from the mining activities. Impressed with the product and GCE's excellent client service and understanding of the cleaning environment, it has now ordered two new Sentinels.

"Health and safety standards are imperative to Servest and their client, so we had to provide them with one of the highest quality, safest and most reliable machines at a rea-

sonable rate and the Sentinel road sweepers fitted the bill perfectly," says Hilton van Vuuren, GCE industrial sales specialist.

He adds that companies are becoming more and more aware of the importance of hygienic occupational environments. "Companies such as Servest realise that clean working spaces are not only important for the environment, but also for workers' productivity and general morale."

The Sentinel road sweepers are high performers with a unique twin vacuum design, says Van Vuuren. "The Sentinel dust control system meets the most stringent PM-10 environmental requirements – with unsurpassed manoeuvrability. The Sentinel will slip under low clearances, weave in and out of obstacles, down alleyways, and over thorough-
