

Example from Goscor Lift Truck Company's new Crown WT3000 pallet truck series

Significant advances

Soon the all-new Crown WT3000 pallet trucks will join the army of Crown machines loading, unloading and picking goods in warehouses and loading bays across the land.

Goscor Lift Truck Company's (GLTC) MD, Darryl Shafto says the WT3000 series has all the qualities a pallet truck requires to work day in and day out in demanding conditions. "This is an ultra-tough design with unique

durability and outstanding ergonomics," Explains Daryl.

With respect to Crown's philosophy that a 'comfortable operator is a productive operator', the WT3000 may be the best a ever designed. It comes with Crown's patented FlexRide system which reduces vibration by up to 80% while its floating suspension system reduces operator fatigue and prevents knee and back pain. "Perhaps best of all," says Daryl, "the shock-absorbing suspension smoothes out uneven floors so operators no longer have to slow down when crossing ramps, boards and sills. The net result is faster loading and unloading and greater productivity all-round."

The rear-entry models are even available with Crown's unique, patented, weight adjustable FlexRide system, which, in this case, optimises driv-

ing comfort by tuning the vehicle's suspension to the individual's body weight!
